

SHYLO: A PRESENT FOR YHWH

NOTES:

We define an AeroStructure as a lighter than air structure.

And I looked, and, behold, a whirlwind came out of the north, a great cloud, and a fire infolding itself, and a brightness was about it, and out of the midst thereof as the colour of amber, out of the midst of the fire. Also out of the midst thereof came the likeness of four living creatures. And this was their appearance; they had the likeness of a man. And every one had four faces, and every one had four wings. And their feet were straight feet; and the sole of their feet was like the sole of a calf's foot: and they sparkled like the colour of burnished brass. And they had the hands of a man under their wings on their four sides; and they four had their faces and their wings. Their wings were joined one to another; they turned not when they went; they went every one straight forward. As for the likeness of their faces, they four had the face of a man, and the face of a lion, on the right side: and they four had the face of an ox on the left side; they four also had the face of an eagle. Thus were their faces: and their wings were stretched upward; two wings of every one were joined one to another, and two covered their bodies. (Ezekiel 1:4-11 KJV)

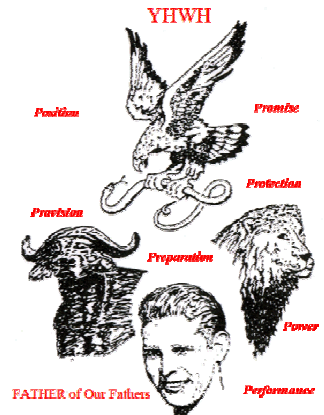

AeroStructure: CLOUD (DETAILS NOT AVAILABEL.)

PHOTGRAPH OF AVHM MODEL: VIEW FROM NEW CITY

CHAPTER

11

Kingdom Power:

ENERGY on A Very High Mountain

On Planet Earth

And the LORD will create upon every dwelling place of mount Zion, and upon her assemblies, a cloud . . .
(Isaiah 4:5 KJV)

Specifically this Hebrew word translated 'cloud' means: a nimbus, vertical, or thunder type cloud.

Picture one of those tall slender clouds that you see rising straight up above the prairie in the summer; a cloud called a towering cumulus cloud with an anvil on its top. Now place your picture on top of the dome. This CLOUD is covering the assemblies and rises thousands of feet in the air.

**NO ENERGY,
NO PEACE!**

SHYLO: A PRESENT FOR YHWH

Although it is cloud like, it really is a lighter than air man made structure similar to a rigid cylindrical airship. This one being different from the common airship in its structure, orientation and purpose. First, one end of this lighter than air ship is attached to the top of The Dome right over the HABITAT; the other end is orientated vertically, standing erect like a person.

ELECTRIFIED MOUNTAIN

There are seven (7) main purposes for this CLOUD structure: 1) to TRANSPORT the center/top portion of AVHM into position, 2) to cover and provide a roof over the 40 ASSEMBLY HALLS, 4 COURTS and 6 GATES WAYS on top of AVHM, 3) to generate electrical potential to perform work and provide light for AKD, 4) to condense water from the warm moist air rising in and around the CLOUD, 5) to provide cold air, piped down from the CLOUD'S upper end. This cold air is used to: 6) ventilate and pressurize the DOME'S interior and 7) provide beauty, adornment and GLORY for AVHM.

Isaiah 4:5 continues:

“ . . . and smoke (vapor) by day, . . .

To accomplish the electrical potential, part of the condensed water is charged with static electricity and sprayed out over the DOME and the surrounding countryside. The CONVECTED RISING AIR is mixed with smoke from the altar providing particulates to assist in condensation and thereby causing the cloud to look like smoke or vapor in the daytime and after dark the illuminated CLOUD will radiate like:

“ . . . the shining of a flaming fire by night:”

Now turn to Ezekiel chapter one (1) where he describes this CLOUD and the DOME'S Elevation in greater detail:

“And I looked, and, behold, a whirlwind came out of the north, a great CLOUD, and a fire in folding itself, and a brightness was about it, and out of the midst thereof as the color of amber, out of the midst of the fire. Ezekiel 1:4

Chapter 11—KINGDOM POWER

The evidence that these verses fit together is found in Ezekiel 1:3 and Ezekiel 43:3.

After Ezekiel had his vision of THE MOUNTAIN and THE HABITAT he says in Ezekiel 43:2-3:

“And . . . the glory was . . . like the vision that I saw by the river Chebar;”

This “vision . . . by the Chebar River” is recorded in Ezekiel chapter one, where he describes THE GLORY (also called a CLOUD) in great detail.

The CLOUD above the DOME will produce perpetual rain as long as there is abundant warm moist air rising and cooling within and around this structure.

The CLOUD is designed to cause the air to rise and cool.

The warm air is sucked up to replace the cold air that is directed downward through four (4) large special tube pairs (STRAIGHT LEGS) Ezekiel said were shaped like “a calf’s foot. (Ezekiel 1:7) This shape provides the least drag.

These tubes are used to segregate the warm and cold air to minimize turbulence and premature heat loss/gain. The cold air in the four tube pairs is fed to four TURBINES whose roofs serve as LANDING PADS on top of AVHM. The TURBINES provide energy, and ventilate AVHM, and ETC. In the space between the pair of tubes is an elevator system used to allow access to the spaces above in the CLOUD.

SUKKAH

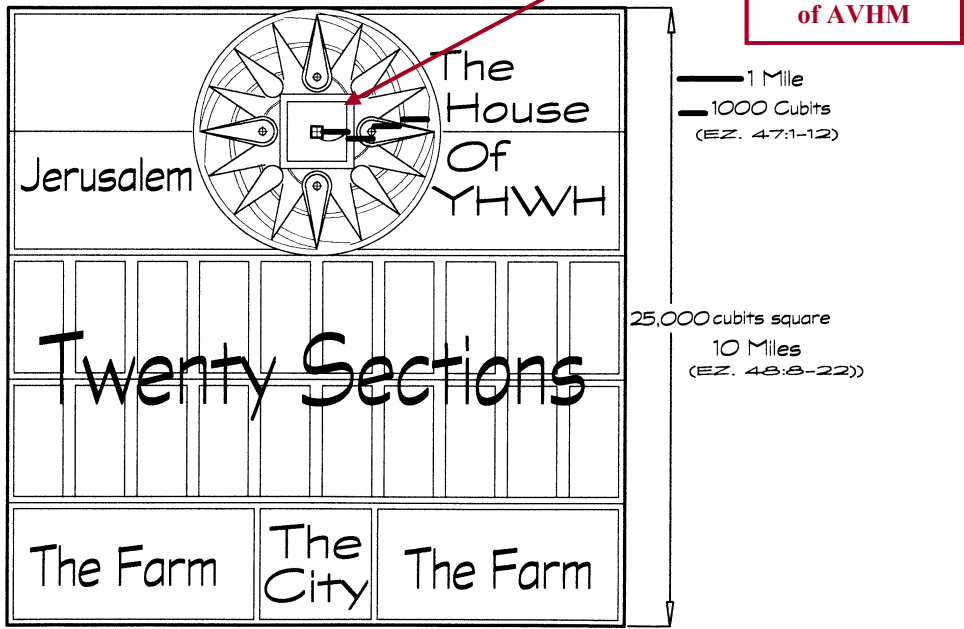

The CLOUD is also described as a tabernacle. This is the Hebrew word is sukkah, and it refers to something light and airy, tent like, portable building. A sukkah is used during Sukkoth, also known as the Feast of Tabernacles.

THE CLOUD has a positive buoyancy and will be made off site. It is used to transport the DOMES UPPER STRUCTURE and connect it to THE DOMES LOWER STRUCTURE to fill in the space on the top. THE CLOUD will carry

SHYLO: A PRESENT FOR YHWH

as much of the top portion of THE DOME and ETC as it is possible to safely lift into position. This makes ETC portable, i.e. transportable, as a SUKKAH. Periodically it could be removed for repairs or even replaced with a refurbished updated model if required. The CLOUD is attached with electromagnets that are designed to be released if sever weather were to endanger the whole structure.

A Kingdom District
Ezekiel 47-48

The CLOUD is a net structure woven like a sock, starting with the toe, in this case the HEAD. Large helium bladders are inflated as the net is woven to lift it vertically until the whole assembly is completed.

A three story weaving loom is constructed in a circle with a diameter equal to the diameter of the CLOUD. Each floor successively weaves the INNER, MID and OUTER GARMENTS.

Chapter 11—KINGDOM POWER

The vertical strand ends of the INNER GARMENT attach to large electro magnets which in turn attach to similar magnets on the top of AVHM.

The MIDDLE GARMENT is shorter than the INNER GARMENT, and it is weighted with large bells attached to the ends of its vertical strands.

The OUTER GARMENT is a massive condenser, with 16 HORIZONTAL GUTTERS to collect condensation and static electric charge. Charged water is then dispensed under pressure as spray and mobilized by wind currents to develop what is known as an AEROSOL GENERATOR; an electrical potential generating device. (RE: Alvin MARKS, US Patents.)

Details of this aerosol and weaving processes are too complex to include in this work, and will have to be developed by a design team assigned specifically to this task.

Summery

The AeroStructure Provides:

1. Lifting tool for AVHM construction
2. Creativity, beauty, adornment and GLORY for AVHM
3. Energy for the Middle East.
4. Water for AKD
5. Covering over ETC
6. Light and other effects
7. Wind energy conversation
8. Air Condition
9. Tourist Attraction
